STRUCTURAL SPECIFICATIONS & SOURCING SERVICES

Hidayath 3D Patterns also known as H3D Patterns offer a unique approach to creating deep textures on metal surfaces by placing sheets on a machine which through heavy pressure confirms the sheet to the desired 3D design of your choice. These sheets can then be colored through the process of PVD.

Metal Embossing has been used to transform the material aesthetic while providing added rigidity to metal surfaces. Hidayath boasts of intricate patterns available with the H3D collection that turn your ordinary surfaces into something worth noticing, while also providing performance benefits.

Applicable On:
Stainless Steel

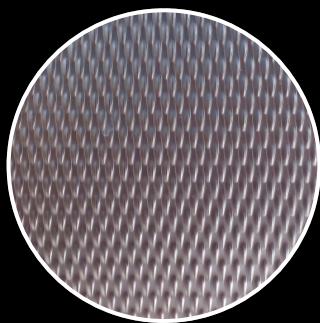

Available in all PVD Colors
